

HEAT STRESS

Not every job can be performed in a comfortable, air conditioned building. Keeping workers cool and hydrated in adverse conditions can keep performance levels high and injuries low. Hat and neck shades, cooling towels and electrolyte drinks help tackle the heat and the problems that come with it.

Identify and Prevent Heat Stress

Symptoms

Heat Exhaustion

- Headaches, dizziness, lightheadedness or fainting
- Weakness and moist skin
- Mood changes such as irritability or confusion
- Upset stomach or vomiting

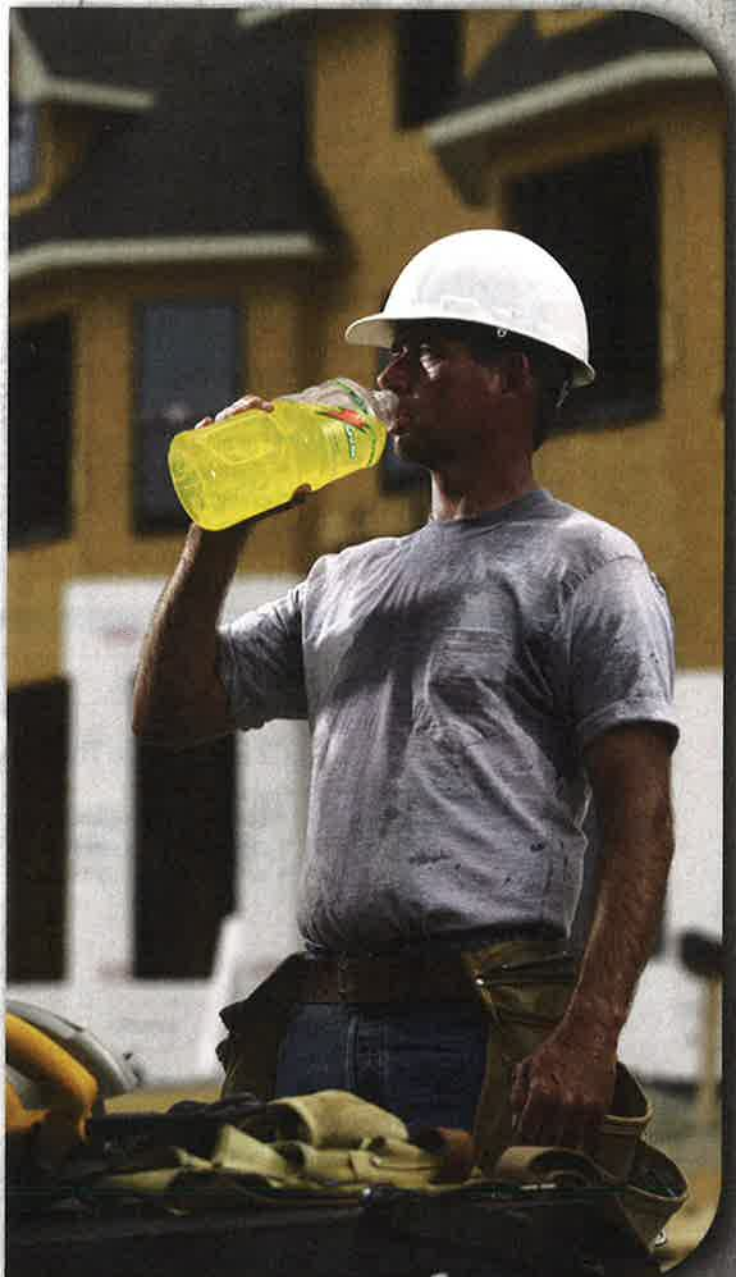

Heat Stroke

- Dry, hot skin with no sweating
- Mental confusion or losing consciousness
- Seizures or convulsions

Prevention

- Be aware of the signs of heat-related illnesses; monitor yourself and coworkers
- Block out direct Sun or other heat sources
- Use cooling fans/air-conditioning; rest regularly
- Drink lots of water; about 1 cup every 15 minutes
- Wear lightweight, light colored, loose-fitting clothes
- Avoid alcohol, caffeinated drinks or heavy meals
